

# Jetson-inference environment setup

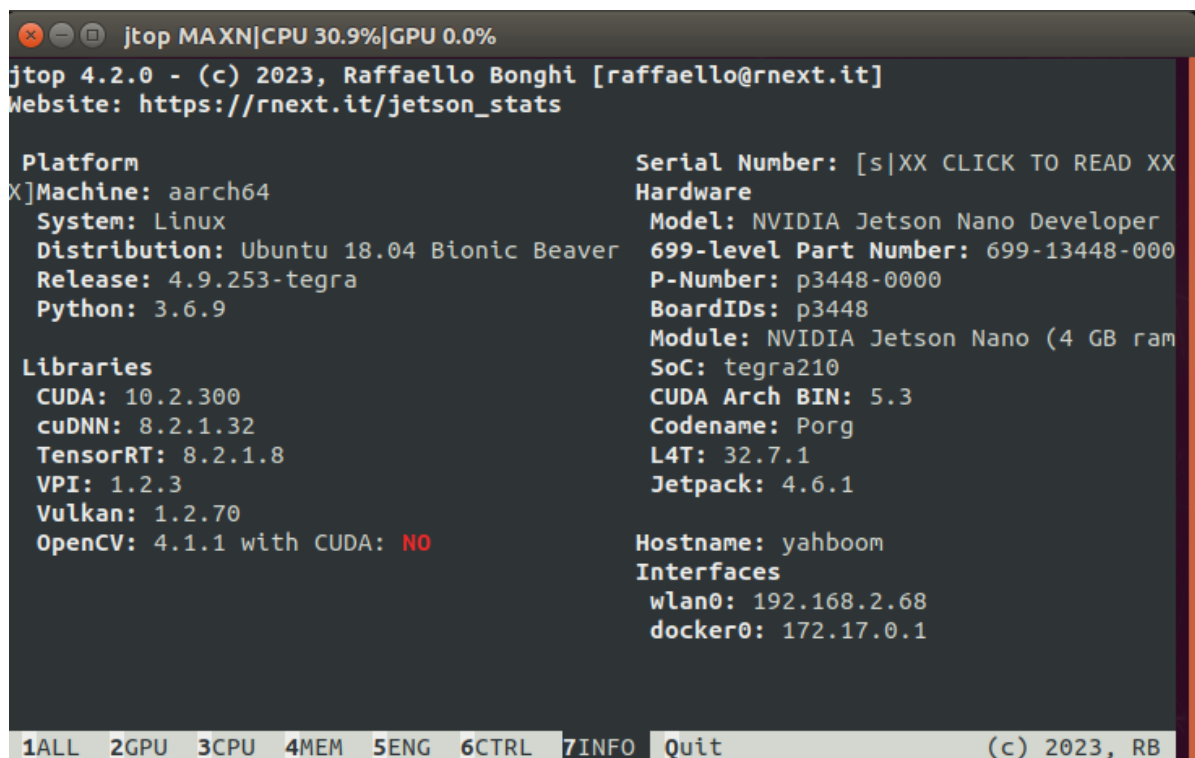

## Jetson-inference environment setup

1. Pre-use instructions
  2. The environment version configuration of this tutorial is shown in the figure:
  3. Start building
    - 3.1 Download the required dependencies
    - 3.2 Download the relevant source code
    - 3.3 Download related python modules
    - 3.4 Modify the file
  4. Install the model
  5. Start compiling
  6. Verify whether the installation is successful
- Appendix

## 1. Pre-use instructions

This tutorial is suitable for building a JETSON NANO image by yourself. If you directly use the YAHBOOM version of the image, you can ignore the tutorial.

## 2. The environment version configuration of this tutorial is shown in the figure:

```
jtop MAXN|CPU 30.9%|GPU 0.0%
jtop 4.2.0 - (c) 2023, Raffaello Bonghi [raffaello@rnext.it]
Website: https://rnext.it/jetson_stats

Platform
X]Machine: aarch64
System: Linux
Distribution: Ubuntu 18.04 Bionic Beaver
Release: 4.9.253-tegra
Python: 3.6.9

Serial Number: [s|XX CLICK TO READ XX
Hardware
Model: NVIDIA Jetson Nano Developer
699-level Part Number: 699-13448-000
P-Number: p3448-0000
BoardIDs: p3448
Module: NVIDIA Jetson Nano (4 GB ram
SoC: tegra210
CUDA Arch BIN: 5.3
Codename: Porg
L4T: 32.7.1
Jetpack: 4.6.1

Libraries
CUDA: 10.2.300
cuDNN: 8.2.1.32
TensorRT: 8.2.1.8
VPI: 1.2.3
Vulkan: 1.2.70
OpenCV: 4.1.1 with CUDA: NO

Hostname: yahboom
Interfaces
wlan0: 192.168.2.68
docker0: 172.17.0.1

1ALL 2GPU 3CPU 4MEM 5ENG 6CTRL 7INFO Quit (c) 2023, RB
```

If you don't want to build it completely by yourself, you can use the jetson-inference compression package we provide, transfer the compression package to JETSON NANO, decompress it, and start directly from "Install Module"

## 3. Start building

### 3.1 Download the required dependencies

```
sudo apt-get update
sudo apt-get install git cmake
```

### 3.2 Download the relevant source code

```
git clone https://github.com/dusty-nv/jetson-inference
cd jetson-inference
git submodule update --init ##If a network error is reported in the middle, you
need to access the Internet scientifically and run it several times, otherwise
the download will be incomplete
```

### 3.3 Download related python modules

Find the torch-1.8.0-cp36-cp36m-linux\_aarch64.whl file from the attachments of our environment and transfer it to jetson nano

```
sudo apt-get install libpython3-dev python3-numpy
sudo apt-get install python3-scipy
sudo apt-get install python3-pandas
sudo apt-get install python3-matplotlib
sudo apt-get install python3-sklearn
pip3 install torch-1.8.0-cp36-cp36m-linux_aarch64.whl
```

### 3.4 Modify the file

Edit jetson-inference/CMakePrebuild.sh. Comment out ./download-models.sh (add a # comment in front) as shown in the figure)

```
echo "[Pre-build] dependency installer script running..."
echo "[Pre-build] build root directory: $BUILD_ROOT"
echo "[Pre-build] build interactive: $BUILD_INTERACTIVE"
echo "[Pre-build] build container: $BUILD_CONTAINER"
echo " "

# break on errors
#set -e

# docker doesn't use sudo
if [ $BUILD_CONTAINER = "YES" ]; then
    SUDO=""
else
    SUDO="sudo"
fi

# install packages
$SUDO apt-get update
$SUDO apt-get install -y dialog
$SUDO apt-get install -y libpython3-dev python3-numpy
$SUDO apt-get install -y libglew-dev glew-utils libgstreamer1.0-dev libgstrea
libgl2.0-dev
$SUDO apt-get install -y qtbase5-dev
#$SUDO apt-get install -y libopencv-calib3d-dev libopencv-dev

$SUDO apt-get update

# download/install models and PyTorch
if [ $BUILD_CONTAINER = "NO" ]; then
#     ./download-models.sh $BUILD_INTERACTIVE
#     ./install-pytorch.sh $BUILD_INTERACTIVE
else
    # in container, the models are mounted and PyTorch is already install
    echo "Running in Docker container => skipping model downloads";
fi

echo "[Pre-build] Finished CMakePreBuild script"
:wq
```

## 4. Install the model

Method 1: You can perform the following steps

```
cd jetson-inference/tools
./download-models.sh
```

After making the selection, the model will be automatically downloaded to the file path of data/network. You need to access the Internet to download it normally

Method 2: You can find the package required by jetson-inference in the attachment provided by us for environment construction, transfer the compressed package in it to jetson-inference/data/network of jetso nano, and then decompress it

Decompression command

```
for tar in *.tar.gz; do tar xvf $tar; done
```

**Note:**

1. For decompressing multiple .gz files, use this command:  
for gz in \*.gz; do gunzip \$gz; done
2. To decompress multiple .tar.gz files, use the following command:  
for tar in \*.tar.gz; do tar xvf \$tar; done

## 5. Start compiling

---

```
cd jetson-inference
mkdir build #Use the package we provide, this sentence can be omitted
cd build
cmake ../
make (or make -j4) # (in the build directory)
sudo make install # (in the build directory)
```

If an error is reported during the process, it means that the source code is not fully downloaded. Please return to step 3.2 and execute the git submodule update --init command, or download it from the browser. The method can be found on Baidu

## 6. Verify whether the installation is successful

---

```
cd jetson-inference/build/aarch64/bin

./imagenet-console ./images/bird_0.jpg output.jpg
# After waiting for a long time, the following appears (it takes a long time for
the first time, but it will be very fast later)
```

```
yahboom@yahboom-desktop: ~/yahboom/jetson-inference/build/aarch64/bin

-- dim #0 3 (CHANNEL)
-- dim #1 224 (SPATIAL)
-- dim #2 224 (SPATIAL)
[TRI] binding -- index 1
-- name 'prob'
-- type FP32
-- in/out OUTPUT
-- # dims 3
-- dim #0 1000 (CHANNEL)
-- dim #1 1 (SPATIAL)
-- dim #2 1 (SPATIAL)
[TRI] binding to input 0 data binding index: 0
[TRI] binding to input 0 data dims (b=1 c=3 h=224 w=224) size=602112

[TRI] binding to output 0 prob dims (b=1 c=1000 h=1 w=1) size=4000
device GPU, networks/bvlc_googlenet.caffemodel initialized.
[TRI] networks/bvlc_googlenet.caffemodel loaded
imagenet -- loaded 1000 class info entries
networks/bvlc_googlenet.caffemodel initialized.
[image] loaded './images/bird_0.jpg' (368 x 500, 3 channels)
class 0015 - 0.998702 (robin, American robin, Turdus migratorius)
imagenet-console: './images/bird_0.jpg' -> 99.87018% class #15 (robin, American robin, Turdus migratorius)

[TRI] -----
[TRI] Timing Report networks/bvlc_googlenet.caffemodel
[TRI] -----
[TRI] Pre-Process CPU 0.08995ms CUDA 0.64693ms
[TRI] Network CPU 72.14478ms CUDA 71.47083ms
[TRI] Post-Process CPU 0.97890ms CUDA 1.06088ms
[TRI] Total CPU 73.21364ms CUDA 73.17864ms
[TRI] -----

[TRI] note -- when processing a single image, run 'sudo jetson_clocks' before
to disable DVFS for more accurate profiling/timing measurements

imagenet-console: attempting to save output image to 'output.jpg'
imagenet-console: completed saving 'output.jpg'
imagenet-console: shutting down...
imagenet-console: shutdown complete
```

Find the corresponding directory and check output.jpg as follows. The recognition result will be displayed at the top of the image.
