

Affine transformation

Affine Transformation (Affine Transformation or Affine Map) is a linear transformation from two-dimensional coordinates (x, y) to two-dimensional coordinates (u, v).

Its mathematical expression is as follows.

$$\begin{cases} u = a_1x + b_1y + c_1 \\ v = a_2x + b_2y + c_2 \end{cases} \downarrow$$

The corresponding homogeneous coordinate matrix representation is:

$$\begin{bmatrix} u \\ v \\ 1 \end{bmatrix} = \begin{bmatrix} a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \\ 0 & 0 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ 1 \end{bmatrix} \downarrow$$

Affine transformation maintains the "straightness" (a straight line remains a straight line after affine transformation) and "parallelism" of a two-dimensional figure (the relative position relationship between straight lines remains unchanged, parallel lines remain parallel lines after affine transformation, and the position order of points on the straight line does not change).

Three pairs of non-collinear corresponding points determine a unique affine transformation. The rotation and stretching of an image is the image affine transformation. Affine transformation also requires an M matrix, but because affine transformation is relatively complex, it is generally difficult to find this matrix directly. OpenCV provides an automatic solution to M based on the correspondence between the three points before and after the transformation.

The function is as follows:

```
M=cv2.getAffineTransform(pos1,pos2)
```

The two positions are the corresponding position relationship before and after the transformation.

The output is the affine matrix M.

Then use the function cv2.warpAffine().

Code path:

```
~/jetcobot_ws/src/jetcobot_opencv/opencv_basic02_OpenCV Transform/05Affine transformation.ipynb
```

```

import cv2
import numpy as np
import matplotlib.pyplot as plt

img = cv2.imread('yahboom.jpg',1)
img_bgr2rgb = cv2.cvtColor(img, cv2.COLOR_BGR2RGB)
plt.imshow(img_bgr2rgb)
plt.show()
# cv2.waitKey(0)

```

```

imgInfo = img.shape
height = imgInfo[0]
width = imgInfo[1]
#src 3->dst 3 (Upper left corner,Lower left corner,Upper right corner)
matSrc = np.float32([[0,0], [0,height-1], [width-1,0]])
matDst = np.float32([[50,50], [300,height-200], [width-300,100]])
#combination
matAffine = cv2.getAffineTransform(matSrc,matDst)# mat 1 src 2 dst
dst = cv2.warpAffine(img,matAffine,(width,height))
img_bgr2rgb = cv2.cvtColor(dst, cv2.COLOR_BGR2RGB)
plt.imshow(img_bgr2rgb)

```
