JupyterWidgets Configuration Tutorial

1. Install the plugin

Please make sure that Jupyter lab has been installed, open the system terminal, and enter the following command to install the plugin.

```
sudo jupyter labextension install @jupyter-widgets/jupyterlab-manager
sudo jupyter labextension install @jupyterlab/statusbar
```

2. Test

1. Open and enter jupyter lab

```
jupyter lab
```

2. Enter Notebook

3. Copy and paste the sample code

```
from __future__ import print_function
from ipywidgets import interact, interactive, fixed, interact_manual
import ipywidgets as widgets
def f(x):
return x
interact(f, x=10);
```

4. Use the shortcut key to start running. If the result is as follows, Jupyter Widgets configuration completed

Shift+Enter

```
[1]: from __future__ import print_function
     from ipywidgets import interact, interactive, fixed, interact_manual
     import ipywidgets as widgets
     def f(x):
         return x
     interact(f, x=10);
```

x ──────○────── 10

```
[1]: from __future__ import print_function
     from ipywidgets import interact, interactive, fixed, interact_manual
     import ipywidgets as widgets
     def f(x):
         return x
     interact(f, x=10);
```
